Security and Compliance on AWS

Vertical Relevance and AWS Professional Services have extensive experience in helping financial services institutions achieve security and compliance on AWS. We understand the unique security, regulatory, and compliance obligations financial services institutions face on a global scale. Vertical Relevance and AWS have collaboratively established a framework that incorporates proven best practices for managing risk and addressing threats in cloud environments.

Key Activities

- Map your organization's compliance requirements to your AWS environment

- Close control gaps and maintain continuous compliance through documented control decisions, compliance validations, and automated remediations

- Accelerate compliance when onboarding new workloads by leveraging native AWS services to implement compliance-as-code

- Provide visibility and transparency through a single pane of glass

Customer Outcomes

- Decreased time to **AWS account launch** with security and compliance controls to meet **ATO requirements in 30 mins**

- Decreased person hours **by 300% for successful completion** of Audits

- Increased **speed of identification of risks** from weeks to a **matter of minutes**

- Increased visibility of AWS security posture to over **400+ accounts on a real time basis**

- Increased **automated** security test cases to over **3,000 executed on every pull request**

What do customers say about Security and Compliance on AWS?

"Enhancing our AWS security with automated security controls on every pull request has been a revelation. It's like having a vigilant guardian watching over our AWS accounts in real time, ensuring our security posture is fortified with every code change."

---SVP Core Engineering, a global asset management company

"We've seen remarkable improvements in our compliance journey. Our audit process has become lightning fast, saving us 300% in person hours. Plus, we now identify and address risks in minutes, not weeks – a real game-changer for our security posture."

-- VP Security Engineering, a global payments company
